

## Windows Update / Office Update

You may have noticed when you open your start menu, that Windows Update is an available option.

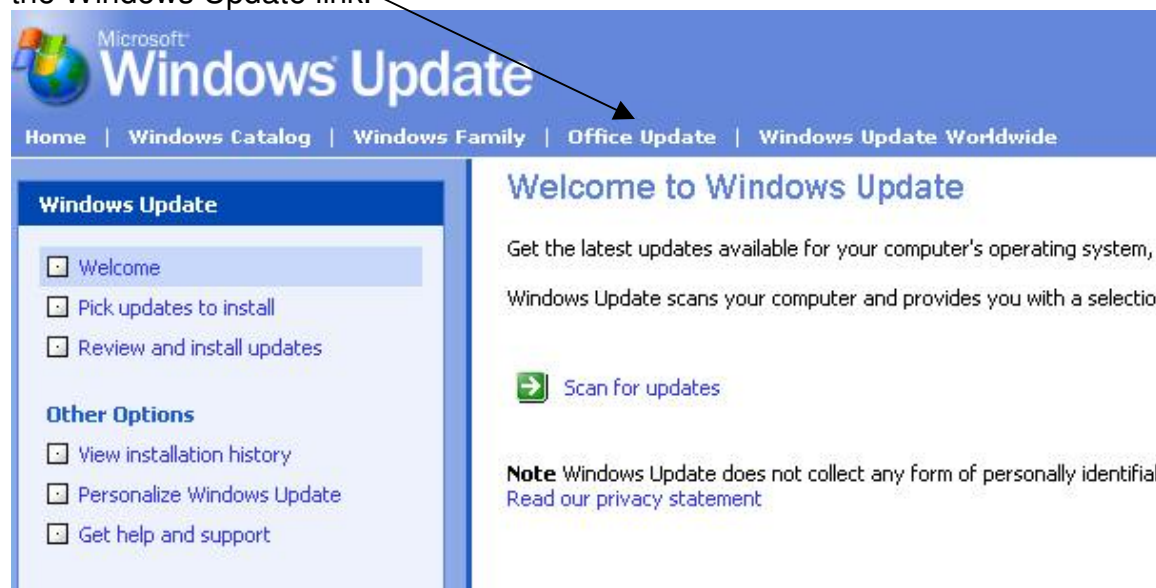

This is a link to Microsoft's automatic update site. Once at the site, you have the opportunity to scan your computer for updates.

This is useful as any known security problems can be sorted out automatically.

These updates don't include Microsoft Office though and it is advisable to apply updates for this too.

Although there is no start menu link to the office update site, you can get to it via the Windows Update link.
